

Storyboard

Husband and wife sit down with doctor to review the husband's test results.

Husband has been having increasing issues with memory.

Wife was becoming concerned when he was having difficulty remembering important appointments, and the names of their friends.

Doctor: “Mr. White, your test results have confirmed what your symptoms were suggesting, that you are in the early onset of Alzheimers.”

Mr. White: “What, I have Alzheimer's? What am I going to do now? How can you help me?”

Doctor: "A diagnosis of Alzheimer's can come as a shock. Even if you have been half expecting it. However, there is much that you can do in the early stages that can help to make life easier and more enjoyable, both now and in the future."

“One of these options I feel you would be an excellent candidate for. Have you heard of Google Glass?”

Mr. White: "Doctor, how will glasses for the computer help me?"

Doctor: “Google Glass is a new augmented reality technology that you wear, like glasses. It displays information on one of the lenses just above your right eye. A new app called Visual Memory written for Google Glass has been specifically designed for patients affected by early on-set Alzheimer's.”

Mr. White: "Hold on now doc, I already wear glasses."

Mrs. White: “Doctor, how will wearing Google Glasses be able to help with my husband’s loss of memory?”

Doctor: "Google Glass, synched with Visual Memory, will not cure his fading memory, but will help your husband keep his normal routine through customized reminders."

“This app is what we call an 'assistive technology' which is 'any device or system that allows an individual to perform a task that they would otherwise be unable to do, or increases the ease and safety with which the task can be performed'.”

Mr. White: "Doctor do you really think this will help me?"

Doctor: “This technology is not a substitute for medical treatments, but it will help you to continue to live a more normal life for longer, and reduce the levels of confusion and frustration you have been experiencing.”

Mr. White: "Well... I guess it will be nice to have some help without embarrassing myself, forgetting who I'm talking to, and what I need to get done..."

Mrs. White: “How can we learn more about this app?”

Doctor: "I will put you in touch with the developers, as well as provide you a user's manual."

Mr. White: "Visual Memory huh? Thanks doc, I'm glad there are people out there trying to help those who need it."

THE END
