

Research Assistant Position in Sea-Surface Drag Parameterizations

Positions Description

The [Flow Dynamics and Turbulence Laboratory](#) (FDT Lab) at the [Department of Mechanical Engineering](#) of the [University of Texas at Dallas](#) (UT Dallas) invites highly motivated graduate students to join our research team in the upcoming Spring, Summer, or Fall of 2024. We are actively looking for a Ph.D. student with a strong background in large-eddy simulations (LES) as part of a recently NSF-funded research initiative in collaboration with PI [Zappa](#) at [Lamont-Doherty Earth Observatory](#) (LDEO) and PI [Giometto](#) at [Columbia University](#). This initiative will focus on developing a sea-state-dependent parameterization of surface stress based on the scale-invariance argument of surface drag using a tight integration of infrared imaging technology and a large-eddy simulation (LES) framework for air-sea interactions.

This is a unique opportunity for the prospective Ph.D. student to work on a collaborative research effort aimed at contributing to a pressing topic. In addition to contributing to impactful research, the graduate student will have ample opportunities for collaboration. Particularly, the prospective student will have the opportunity to spend the summer of each year at LDEO and Columbia University, working closely with collaborating PIs. The student will also participate in laboratory/field data analysis and code development, gaining invaluable experience in analyzing both measurement and numerical data.

Required Qualifications

- Bachelor/Master of Science in Mechanical Engineering, Civil Engineering, Ocean Engineering, or an equivalent terminal degree by the date of hire.
- Strong background in direct numerical simulation (DNS) or LES of atmospheric and oceanic flows.
- Proficiency in Fortran, Python, and MATLAB programming languages.
- Proficiency in high-performance computing (HPC) and parallel computations.
- Strong research interests in fluid dynamics, turbulence, turbulent boundary layer flows, air-sea interactions, free surface processes, and gravity waves.
- Capability to work independently and as part of a team, with excellent interpersonal, written, and oral communication skills.

Preferred Qualifications

- Prior documented experience with developing LES models and codes using Fortran.
- Demonstrated track record in the development of DNS or LES codes and HPC algorithms.
- Research experience with a record of peer-reviewed publications in fluid dynamics, turbulence, turbulent boundary layer flows, air-sea interactions, free surface processes, or gravity waves.

Application Instructions

Interested applicants should meet the minimum admission requirements of the [Office of Admission and Enrollment](#) and the [Department of Mechanical Engineering](#). Qualified candidates are encouraged to

contact Dr. [Kianoosh Yousefi](mailto:kyousefi@utdallas.edu) at kyousefi@utdallas.edu with their **CV**, **unofficial transcripts**, and **1-page research statement** briefly discussing their research interests and highlighting their experience in LES code development. For the email subject line, use "**Prospective Ph.D. student: ASI-DSR**".

Before reaching out, you are also advised to read the [FDT Lab participation manual](#) and [recent publications](#) to ensure our mentoring and research philosophies are truly in line with your passions. Please note that only complete applications with all requested documents will be considered. Given the large volume of incoming applications, only those selected for further consideration will be contacted back.

About UT Dallas and Dallas–Fort Worth Area

Located in the heart of the 4th largest metropolitan area of the nation, UT Dallas enrolls over 30,000 students. UT Dallas is among the top universities in the country and highly ranked in value, ethnic diversity, and low student debt, based on the [US News & World Report](#). The Department of Mechanical Engineering at UT Dallas was founded in 2008, offers B.S., M.S., and Ph.D. degrees, and, according to US News & World Report, is ranked third in Texas. The department is home to more than 1,100 undergraduate students, 200 graduate students, and 34 faculty. It is also home to a unique [Boundary Layer and Subsonic Wind Tunnel](#) (BLAST) for renewable energy research and supports [UTD Wind](#) and [WindSTAR](#) research centers. The [Dallas–Fort Worth Metroplex](#) is one of the nation's largest urban areas, with shopping, entertainment venues, museums, art galleries, and places for outdoor running, biking, hiking, and skating. Foreign Policy magazine named Dallas one of only five US cities in the top 25 in its projection of the most dynamic cities in the world in 2025.

Equal Employment Opportunity

The University of Texas at Dallas, the Department of Mechanical Engineering, and the FDT Lab are all committed to providing an educational and working environment that is welcoming, respectful, and inclusive of all members of the university community. The University prohibits unlawful discrimination against a person because of their race, color, religion, sex (including pregnancy), sexual orientation, gender identity, gender expression, national origin, age, disability, genetic information, or veteran status.
